

ACCULON OS 2.0 STAR

Official User Instructions

By Joseph Jarrell — Acculon Computer Company 2026

What is Acculon OS?

Acculon OS 2.0 STAR is a fully custom bare metal operating system built from scratch in C and x86-64 assembly by Joseph Jarrell, Founder of Acculon Computer Company. It runs directly on real PC hardware or inside a virtual machine — no other operating system required.

What's Included

- Acculon OS 2.0 STAR bootable ISO file (myos.iso)
- This instruction document
- Free email support from Acculon Computer Company

System Requirements

Real Hardware

- Any x86-64 PC (64-bit processor required)
- USB drive (any size, will be erased)
- UEFI firmware (most PCs made after 2012) or BIOS firmware (almost all before 2012)
- Secure Boot disabled in BIOS settings

Booting from USB (Real Hardware)

Warning: This will erase your USB drive!

1. On Mac, open Terminal and run: `diskutil list` — find your USB drive (e.g. `/dev/disk2`)
2. Unmount it: `diskutil unmountDisk /dev/disk2`
3. Flash the ISO: `sudo dd if=~/Desktop/myos.iso of=/dev/rdisk2 bs=1m`
4. Eject: `diskutil eject /dev/disk2`
5. Plug USB into your PC, restart and press F12 (or F2/Delete) to open boot menu

6. Select your USB drive from the boot menu
7. If it won't boot, go into BIOS settings and disable Secure Boot

First Boot

When Acculon OS boots for the first time:

- You will see the boot animation with the ACCULON logo and progress bar
- After logging in you will see the command line interface
- Type startgui to launch the graphical interface
- Type help to see all available commands

Available Commands

<code>help</code>	— Show all available commands
<code>startgui</code>	— Launch the graphical interface
<code>hello</code>	— Say hello to Acculon OS
<code>joke</code>	— Hear a joke from the OS
<code>model</code>	— Show system model information
<code>credits</code>	— Show OS credits
<code>ls</code>	— List all files
<code>newfile X</code>	— Create a new file named X
<code>write X Y</code>	— Write text Y to file X
<code>read X</code>	— Read the contents of file X
<code>del X</code>	— Delete file X
<code>calc X op Y</code>	— Calculate (e.g. <code>calc 5 + 3</code>)
<code>cd COLOR</code>	— Change background color (green, blue, red, purple, gold, teal)
<code>export</code>	— Save files to disk

shutdown — Shut down Acculon OS

clear — Clear the screen

GUI Guide

Type startgui to enter the graphical interface. Use LEFT and RIGHT arrow keys to switch between tabs:

Menu — Launch OS features and get system information

System Info — View hardware and OS details

About — About Acculon OS and Acculon Computer Company

Calculator — Instructions for using the calculator command

Notepad — Create and edit text files

Files — Browse, preview, and manage your files

Press ESC to exit the GUI and return to the command line.

Troubleshooting

Black screen on boot: Wait 10-15 seconds — the boot animation takes a moment to start.

USB won't boot: Make sure Secure Boot is disabled in your BIOS settings. Try pressing F12 on startup and selecting the USB manually.

Screen looks wrong: Acculon OS works best at 1024x768 or higher resolution.
